

CALI® eucalyptus

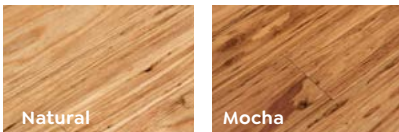

CALI eucalyptus Natural

Remarkable in Every Way

Transform your home with truly show-stopper flooring that does good for the planet. Fossilized eucalyptus planks are highly sustainable and introduce a unique wood grain to homes – adding intrigue without being overly dramatic. Natural wood tones complement any interior design and come in two flattering shades – Natural and Mocha. A premium 10-coat aluminum oxide finish shields planks from wear and tear.

Available Colors

CALI eucalyptus Mocha

Simply Sustainable

As the world’s fastest growing tree, eucalyptus can be trimmed for timber without harming the plant or surrounding environment. The tree requires very little water and grows back quickly, providing more renewable building material.

Enhanced Durability

CALI’s Fossilizing process gives Eucalyptus flooring Janka hardness scores of up to 4000+. That’s 3x harder than oak. Harder, denser planks provide better protection against large pets, furniture, and everyday use.

Uncommon Beauty

Eucalyptus’s swirling wood grain makes the perfect statement, bringing depth and luxury to any space. The Fossilizing process yields unique patterns, similar to exotic timbers like tigerwood, but without drawing from limited resources.

Construction	Solid
Milling	T&G and Click
Grain	Fossilized® Strand Eucalyptus
Plank Length	Click: 47-1/4"
Plank Width	Click: 5-1/4"
Plank Thickness	9/16"
Install Type	Click: Glue
Residential Warranty	50 Years
