Boardwalk Engineered Bamboo

A More Versatile Hardwood

CALI's Eco-Engineered flooring features all the benefits and beauty of a solid Fossilized® bamboo or eucalyptus floor, but is made for more challenging climates and temperamental spaces like kitchens, bathrooms, and basements. Each plank combines an extra-thick top wear layer of bamboo or eucalyptus over cross-constructed sustainable wood core. Its innovative design means planks require 60% less acclimation time and include extra wide options – resulting in speedy, sturdy installations.

Java Engineered Bamboo

An Installer's Dream Floor

Extra-wide plank options allow for faster installations, and a more dimensionally stable construction means less acclimation time (1-2 days vs. the 5 day minimum for solids).

13-Coat Scratch-Resistant Finish

That's three coats more than our hardest solid bamboo floors, protecting the crucial top wear layer from large pets, kids, furniture, and heavy traffic.

50 Year Guarantee in Every Room

Fear not the below grade installation! Even tricky spaces are backed by a 50 year residential warranty. These floors are designed to thrive where others cannot.

Strength Meets Sustainability

Every layer of every plank makes use of rapidly-growing timber to form its sustainable wood core. Good for your space, and good for the planet!

Accessories

Grain	Fossilized® Strand Bamboo
Construction	Engineered Bamboo
Plank Length*	Options ranging from 36" to 72-7/8"
Plank Width*	Options ranging from 3-3/4" to 7-1/2"
Plank Thickness*	Options ranging from 11 to 15mm
Sqft./Box*	Options ranging from 21.5 to 27.28 sqft.
Milling*	Click, Tongue-and-Groove
