

Java Fossilized™ T&G Bamboo Flooring

Quite simply the hardest floors in the world.

Twice the density and strength of almost any other flooring in the world, our Fossilized™ Strand Woven flooring undergoes a proprietary manufacturing process that has scored over 5000+lbs. on the Janka hardness test. The effect of this process enhances both the color and grain contrast throughout the floor planks which makes for a more vibrant lifelike floor and emphasizes the natural beauty of the bamboo fibers.

Announcing the World's Hardest Floors...
